Maternal Morbidity and Mortality Data and Analysis Initiative

Improve maternal health data to advance health equity

Create a network of 200+ hospitals deploying evidence-based practices

Improve Maternal Morbidity and Mortality Data: National Maternal Infant Analysis

- 1. Data Collection Analysis and Reporting
 - Analysis of up-to-date and ongoing data on maternal and infant mortality
 - Nationally representative
 - Standardized inpatient data and hospital discharge data platform

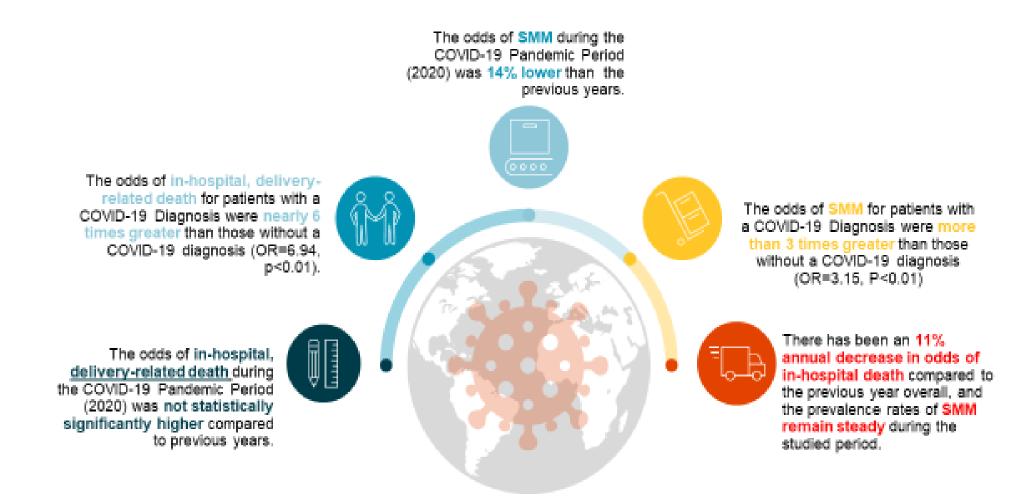

Improve Maternal Morbidity and Mortality Data: National Maternal Infant Analysis, cont.

Data include:

- National baseline of maternal infant outcomes 2008 present
- Relationships between maternal and infant data
- Association of age, race, ethnicity, cesarean rate, co-morbidities including obesity, hypertension, and diabetes as well as any other relevant contributing conditions

The COVID-19 Pandemic Impacts Outcomes for the Maternal Delivery Population

Improve Maternal Morbidity and Mortality Data: Perinatal Collaborative

- 2. Implementation and Analysis of Evidence-Based Interventions
 - Recruitment of at least 200 diverse birthing hospitals to join the collaborative
 - Defined areas of focus overarching disparities considerations
 - Individualized hospital performance improvement support

HHS Perinatal Improvement Collaborative

A collaborative of hospitals and health systems

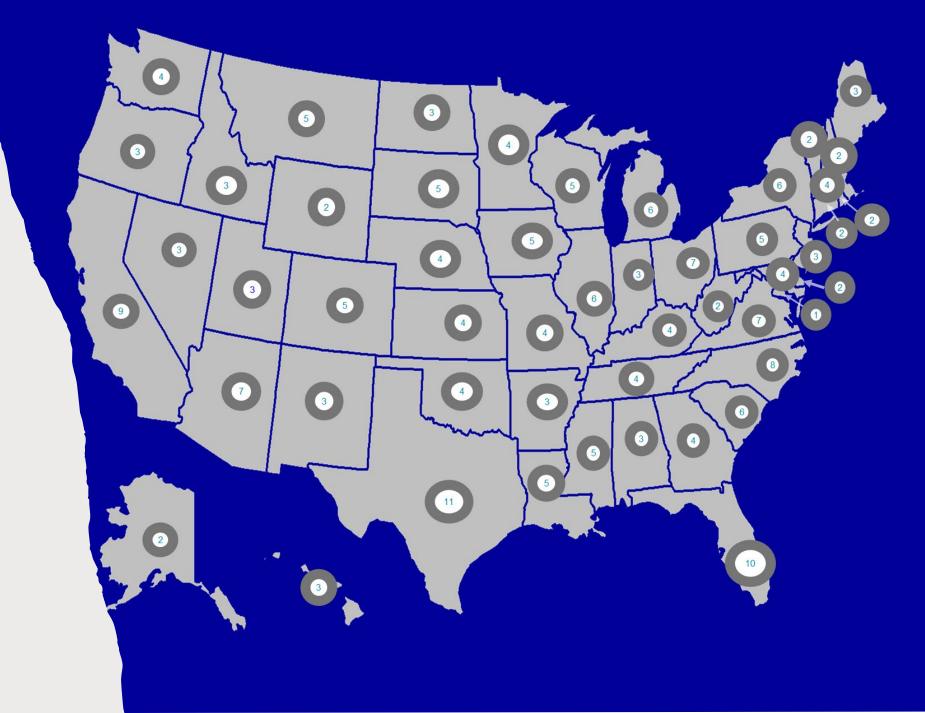

- Multi-year initiative
- Aligns and augments national strategies
- Measurable deliverables:
 - ✓ Perinatal Collaborative Outcome Dashboard
 - ✓ Measurable High Reliability Site Assessment
 - ✓ Individualized Improvement Roadmap

Key partnerships with **MoMMA's Voices** and **National Birth Equity Collaborative (NBEC)**

HHS Perinatal Improvement Collaborative:

- 220 diverse U.S. hospitals
- Over 500,000 births / year

The initiative assesses the efficacy evidence-based interventions on maternal infant morbidity and mortality. The following outcome areas of focus are included with overarching considerations on health equity including disparities and social determinants.

- 1. Hypertensive Disorders of Pregnancy
- 2. Cesarean Birth
- 3. Cardiovascular Conditions
- 4. Diabetes in Pregnancy
- 5. Obstetric Hemorrhage
- 6. Maternal Mental Health
- 7. Substance Use Disorders
- 8. Neonatal Abstinence (NAS)
- 9. Prematurity
- 10. Sepsis and Infections including COVID-19
- 11. VTE Prevention
- 12. Breastfeeding

- 13. Culture of Safety and Team Dynamics
- 14. Regulatory and Accreditation
- 15. Maternal Levels of Care
- 16. Postpartum Care
- 17. Severe Maternal Morbidity
- 18. Support After a Severe Event
- 19. Shoulder Dystocia
- 20. Social Determinants
- 21. Health Equity
- 22. Risk and Adverse Events
- 23. Care Variation Efficiency

Over 150 outcome measures captured to understand clinical and non-clinical factors impacting overall maternal infant outcomes.

Linked Maternal Infant Analysis

Two-Pronged Approach: Data Analysis and Collaborative

Identify drivers of maternal mortality and morbidity

and **implement solutions** to make America the safest place to have a baby.

Perinatal Improvement Collaborative

Data-Driven Collaborative of 200+ Hospitals to Scale Evidence-Based Care Practices

This cohort includes hospitals that serve patients with greater disparities and health barriers. National Maternal Infant Analysis

Data-Driven Insights on Key Drivers of Harm and Death

Leverages data to analyze and pinpoint the root causes of morbidity and mortality.
